

BHADRESHKUMAR MALANKIYA

Senior Full Stack Engineer | Technical Lead | Full Stack Architect | AI Engineer

React • Next.js • Node.js • Laravel/PHP • AI & GenAI Engineering

Surat, Gujarat, India | bhadreshm3418@gmail.com | +91-73593-59602 | bhadresh-malankiya.ascendxi.com

SUMMARY

Senior Full Stack Engineer, Technical Lead, Full Stack Architect, and AI Engineer with 8+ years of experience (spanning SDE1 through SDE3+ scope) across React, Next.js, Node.js, PHP/Laravel, TypeScript, and Python, building and owning production systems end to end. Sole technical owner and architect of a SaaS platform grown from the ground up to 400K+ users and 9M+ respondents within 4 years, driving 3x revenue growth and 99.8% uptime at 100K+ concurrent users. Designs system architecture, cloud infrastructure (AWS/Azure), and event-driven microservices (Kafka/RabbitMQ) end to end, and leads engineering teams through delivery. Also works as a hands-on AI/GenAI engineer, building production RAG pipelines and LLM-integrated features (OpenAI, Gemini, Anthropic Claude/Claude Code) and custom agent automation to ship AI-first products and streamline engineering workflows. Backed by a hands-on applied security background (Burp Suite, XSS/CSRF, OWASP, TryHackMe Top 6% Global) that shapes how he designs and reviews systems.

CORE SKILLS

- Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Vue.js, pixel-perfect responsive UI
- Backend:** Node.js/Express, PHP/Laravel, REST APIs, microservices, distributed systems, event-driven architecture (Kafka, RabbitMQ, BullMQ/Redis, Redis Pub/Sub)
- Languages:** JavaScript/TypeScript, PHP, Python, SQL
- Data & Cloud:** PostgreSQL, MongoDB, Redis, AWS (EC2, RDS, ElastiCache, DynamoDB, SQS, SNS, API Gateway, Lambda), Azure, Docker, Kubernetes, CI/CD, RunCloud, NGINX/Apache configuration, SSH-based deployment, DNS/domain management
- Real-Time:** WebSocket, Socket.io, RxJS for high-frequency streaming and throttling
- AI / GenAI Engineering:** OpenAI & Gemini APIs, Anthropic Claude & Claude Code, RAG pipelines (pgvector), Model Context Protocol (MCP), Composio, Agent OS, Cursor, Devin, Windsurf, early v0.dev adopter; leads design and delivery of production AI/GenAI features, builds custom agents, automation pipelines, and task-specific skills, including a self-defined AI peer-reviewer agent for first-pass code review
- Architecture & Leadership:** system design, distributed systems, scalability planning, product ownership, roadmapping, code & design reviews, mentoring, onboarding, cross-functional Agile delivery, observability (Sentry, RunCloud, Redash, Google Analytics)
- Applied Security:** Burp Suite (proxy interception & tampering), XSS/CSRF exploitation, OWASP testing, Kali Linux, shell scripting, CTFs, TryHackMe Top 6% Global

EDUCATION

Bachelor of Engineering, Information Technology | Gujarat Technological University (SSGEC) | CGPA 9.0/10.0 | 2022

Final Year Project: Python security/pentesting toolkit ("Lazy Hacks"), covering port scanning, ARP scanning, MITM automation, DDoS test automation, a backdoor server, SSH/FTP brute-force testing, hash cracking, zip password recovery, and file encryption. Awarded Best Project of the Year, GTU.

EXPERIENCE

ExpressTech Systems | Senior Software Engineer / Technical Lead / Full Stack Architect (2022 – 2026)

- Sole technical and product owner** of ExtendedForms.io, a Google Forms enhancement platform in the Google Workspace ecosystem, owning engineering, infrastructure, and roadmap end to end
- Grew the product to 400K+ users and 9M+ respondents within 4 years** (31M+ Workspace add-on installs), driving 3x revenue growth to \$10,000+ in recurring revenue
- Sustained 99.8% uptime at 100K+ concurrent users
- Redis caching cut DB query time 70% (800ms → 120ms); Next.js SSR cut page load time 60%; reduced churn 40% and grew organic traffic 150%
- Designed and self-managed the full AWS infrastructure (EC2, RDS, ElastiCache, DynamoDB, SQS/SNS, Lambda), plus Azure, RunCloud, and SSH-based deployment
- Built event-driven async processing with Kafka and RabbitMQ for exam/survey invites and background campaigns
- Built a custom CI/CD pipeline with automated testing, security checks, SSH deployment, and rollback automation
- Set up Sentry monitoring with AI-triggered auto-fix PRs; tracked growth via RunCloud, Redash, and Google Analytics
- Provides direct enterprise production support, resolving live client issues within fixed SLA timeframes

- Leads the technical roadmap for a 5-engineer team; conducts code/design reviews, mentors engineers, and coordinates with UI/UX and marketing

HQ Infosystem | *Full Stack Developer → Senior Full Stack Developer (2018 – 2022)*

- Delivered 15+ full-stack applications across fintech, medtech, edtech, and logistics; built REST APIs handling 50K+ daily requests
- Integrated Stripe, Razorpay, Twilio, Mapbox, and Binance; built Stripe Connect payouts; cut API response time 45%
- Owned direct client communication across projects in cross-functional Agile delivery

Freelance Full Stack Developer, Upwork | *concurrent with HQ Infosystem (2020 – 2023)*

- Delivered real-time trading platforms (CompassRT, BPS Trading) for direct clients across Colombia, Germany, and the USA

MB Systems | *Founder (Feb 2020 – Jan 2022)*

- Founded and ran a web development startup with a team of 10+ employees, delivering e-commerce sites for 10+ local Indian and Upwork clients within tight budgets

SELECTED PROJECTS

Quzo.ai: AI-first exam platform | *sole owner, GenAI architecture lead*

Tech: Next.js, Node.js, OpenAI/Gemini, PostgreSQL (pgvector/RAG), Kafka/RabbitMQ, BullMQ, Redis Pub/Sub

- Independently designed and built a two-domain, cloud-native, event-driven architecture: a low-frequency admin domain plus an auto-scaling high-frequency exam domain designed for millions of students, peaking at 10K concurrent examinees
- Kafka/RabbitMQ and BullMQ queuing for answer submissions and email; Redis Pub/Sub for live download-progress updates; RAG pipeline cut exam creation time from 30 minutes to 30 seconds
- In early live stage onboarding enterprise customers after internal dogfooding; provides direct production support within fixed SLA timeframes

Intuitive Surgical: Da Vinci Surgical System Dashboard | *12,000+ hospitals worldwide*

Tech: React.js, TypeScript, Redux, WebSocket, Liferay (portlet architecture), microservices frontend, SSO

- Built a distributed-systems architecture on Liferay, with one independently deployable bundle per page/portlet, SSO, and microservices integration; pixel-perfect, responsive UI over millions of data points with custom chart rendering; sub-100ms UI, HIPAA-compliant, WCAG 2.1 AA

CompassRT & BPS Trading Platform: Real-time trading | *Upwork direct clients*

Tech: React.js, Node.js, RxJS, Socket.io, Binance API, MongoDB, AWS

- Built high-frequency Indian stock market and crypto trading dashboards with RxJS streaming/throttling; 1,000+ concurrent WebSocket connections at sub-100ms latency, \$2M+ trading volume

APPLIED SECURITY

Burp Suite (proxy interception & tampering), XSS/CSRF exploitation, shell scripting, OWASP testing, Kali Linux, CTFs, TryHackMe Top 6% Global (2021), Advent of Cyber, Hacktoberfest contributor.

CERTIFICATIONS & RECOGNITION

Turing Certified Full Stack Developer | GDG Mobile Track Winner (2021) | Speaker, “Scalable Architecture,” GDG Meetup 2022 | 20+ Medium articles (2K+ followers) | Open-source contributor (React ecosystem)
